

Invest in
ISACA-certified professionals,
see the **rewards.**

Invest in ISACA-certified professionals, see the rewards.

As a global IT association that has been around for more than 40 years, ISACA provides certifications that are globally accepted and recognized. These certifications combine the achievement of passing an exam with recognition for actual work experience.

As an employer in today's business climate, investing in current employees is just as important as hiring new employees for your enterprise. Encouraging existing employees to become certified not only provides value for them, but also for your enterprise. Employees who are ISACA-certified contribute to the overall success of the organization by providing trust in, and value from, information systems.

Supporting ISACA's Certified Information Systems Auditor® (CISA®), Certified Information Security Manager® (CISM®), Certified in the Governance of Enterprise IT® (CGEIT®) and/or Certified in Risk and Information Systems Control™ (CRISC™) certifications shows that you are committed to creating value within your organization. Individuals with ISACA certifications:

- Possess demonstrated knowledge and skills in IT assurance, audit, control, governance, risk and security
- Have met the stringent requirements of a globally recognized credential
- Are committed to ongoing professional development
- Have acquired skills and expertise to add value to your enterprise

Optimize value in your audit function.

CISA-certified professionals possess the knowledge and expertise to help their organizations identify critical issues and customize practices to support trust in, and value from, information systems.

CISAs can leverage compliance needs with proactive, independent monitoring needs in order to meet enterprisewide information systems audit requirements.

Many organizations around the world recognize ISACA's CISA credential as the standard for information systems auditors.

Generate business value from all of your information security investments.

CISM-certified professionals have the proven knowledge and expertise in managing, designing, overseeing and assessing information security with the understanding and needs of the organization in mind.

CISMs also have the ability to create a strategic information security program that enables an enterprise to reach its IT business goals.

Individuals with this certification have a broad vision and can integrate operational, regulatory and strategic requirements.

Achieve operational excellence through reliable and efficient applications of technology.

Good IT governance provides for an environment with few surprises and the ability to have an agile response to business issues that arise.

CGEIT-certified professionals can provide seamless integration of the governance of IT into enterprise-wide governance.

CGEITs can help optimize the cost of IT services and technology. These individuals also help support compliance with ever-increasing relevant laws, regulations, contractual agreements and policies.

Maximize opportunity from IT risk and minimize the adverse affects.

As a business leader, you understand the critical nature of IT risk and its impact on the overall risk of the enterprise. CRISCs can help reduce IT risk and increase rewards.

A CRISC-certified professional helps support more effective overall risk management for the organization and maintains IT-related risk at an acceptable level. CRISCs also have the technical knowledge necessary to implement appropriate information systems controls.

CRISCs will also help establish a common perspective and language about IT risk and its impact on the organization as a whole.

Trust in, and Value from, Information Systems

“Having a **CISA** qualification not only benefits me but also my company. When we go to serve our clients they look at our qualifications. In particular, when we go to work for the government in our home country some of the work requires you have a **CISA** qualification. Having a certification that is globally recognized for our kind of work is important because we do travel extensively around the world. Having a certification for IT assurance that is recognized by all of our multinational clients is quite important. Once I became certified, I immediately noticed a difference in the credibility I received from the business community—the **CISA** is proof that I passed a rigorous examination of IT auditing and controls.”

—Vincent Chan, CISA, CGEIT

“As an IT governance professional, it’s my responsibility to ensure that the organization understands the part that IT plays in the achievement of the organization objectives, and to ensure that the IT strategic plan is aligned with the business plan.

As a **CGEIT**, I believe that opportunities are endless. It’s an incredibly valuable certification and well-recognized within my organization. The level of knowledge and experience that the **CGEIT** demonstrates that I have is well-respected by the organization and particularly by the executive management.”

—Howard Nicholson, CISA, CGEIT, CRISC

About ISACA

As an independent, nonprofit, global membership association, ISACA engages in the development, adoption and use of globally accepted, industry-leading knowledge and practices for information systems. ISACA helps its members achieve individual and organizational success, resulting in greater trust in, and value from, information systems. ISACA is credible, relevant, capable and current. Its members and certification holders are qualified and skilled professionals who make a difference. For more information, visit www.isaca.org.

“It isn’t that someone needs a certification to be competent. But when I see the **CISA** or **CISM** listed on a resume, I have more faith in the rest of the content.”

—James C. Samans, CISA, CISM, CRISC

“Having team members complete the **CRISC** certification path allows them to better understand risk applicability, and have the technical knowledge regarding appropriate IS controls. It also offers credibility, not only to the team member, but to the department and to our firm.

The difference between being **CRISC**-certified or not, is one of the key considerations during the hiring process.”

—Berthold Kerl,

Managing Director, Head of Information & Technology Risk Governance
Deutsche Bank AG
