

#### SESSION 1

10:05 AM – 11:05 AM

**Robert Brzezinski, MBA,  
CISA, CISM, CHPS**  
*Principal*  
**Bizwitt**

#### Cloud Security – Detecting Digital Dangers

Cloud solutions are no longer just a Shadow IT, they became a Main Street IT, as business users push for Cloud solutions adoption to improve systems scalability, agility and potentially cost efficiencies. What to look for when selecting Cloud Service Provider? Can cloud solutions improve organization's security and/or audit capabilities? This presentation is an overview of Microsoft Office 365 / Azure security and compliance, and Azure security tools functionality that help manage information privacy, security and compliance risks. For some organizations adopting email or other cloud solutions and creating visibility into these cloud environments is a challenge. Office 365 and Azure security tools are robust, innovative and not yet well know, and they address questions around audit and security visibility into cloud resources. Microsoft Trust Center, Office 365 Security and Compliance, data and identity protection and Azure log analytics security features and reporting will be reviewed to help business / technical audience understand some of the Microsoft Cloud features providing systems' visibility, auditability and security.

Audience will be able to learn about and compare Office 365 / Azure system's visibility, security and compliance capabilities with other Cloud Service Providers offerings/ solutions to make best decision for their organization.

**Session Break: 11:05 AM – 11:15 AM**

## SESSION 2

11:15 AM – 12:15 PM

**Tom Cignarella**  
*Director, Security  
Coordination Center*  
**Adobe**

### **Incident Response for Cloud Services – Swimming in the Compliance Alphabet Soup**

GDPR, NIS, CCPA, CSL.... What does it all mean?!? We in security now live in an age of Alphabet Soup with security, privacy, and related breach regulations from around the world that are constantly evolving. In addition to, or as a result of, this evolution, the lines between security and privacy incidents are increasingly blurred. Over the years, Adobe has handled security incidents that have had privacy implications, but the changing regulatory landscape has made the process more complicated. And, without a proper understanding of all the regulations, the handling of these incidents is scarier than ever. As security professionals, we bring in the privacy experts to provide guidance on proper handling of incidents involving personal information. They are our eyes and ears in an ever-changing regulatory landscape. The interplay between security and privacy is not lost on our customers and, as a result, our customer relationships are best served when all are swimming in synchrony.

This session will discuss how we keep everything working as one even through ongoing organizational changes - teams that were one, then split, but how they have continued to keep the relationship fully above water - leveraging each team's strengths to constantly deliver what our customers expect from us.

#### **Key Learnings:**

- How to make sure your incident response function is prepared for the onslaught.
- How to keep your security and privacy teams functioning as one from the point of view of the customer.
- What to build out in terms of processes, communication protocols, and responsibilities to ensure information sharing is ongoing and responses to issues are in sync and always keep the customer in mind.

**Session Break: 12:15 PM – 12:25 PM**

## **SESSION 3**

**12:25 PM – 1:25 PM**

**Ashwin Krishnan**  
COO  
UberKnowledge

### **Cloud Security Myth Busting - Separating Fact from Fiction**

In this session, we will dive into 8 cloud security myths and expose what is real and what is not.

Fasten your seatbelts as this will be an entertaining, educational and empowering conversation that will give you takeaways to act upon immediately.

## **SESSION 4**

**1:25 PM – 2:00 PM**

### **Interactive Panel Discussion**
