Val IT  The IT governance framework that focuses on value delivery and ensures that IT-enabled investments are managed through their full economic life cycle.
The Seven Principles of Val IT

IT-enabled investments will:
• Be managed as a portfolio of investments
• Include the full scope of activities required to achieve business value
• Be managed through their full economic life cycle

Value delivery practices will:
• Recognize different categories of investments to be evaluated and managed differently
• Define and monitor key metrics and respond quickly to any changes or deviations
• Engage all stakeholders and assign appropriate accountability for delivery of capabilities and realization of business benefits
• Be continually monitored, evaluated and improved

What is Val IT?

Val IT is:
• A complete collection of proven governance and management practices and techniques for investment in IT-enabled business change and innovation
• A framework and supporting publications addressing the governance of IT-enabled business investments

Val IT and COBIT

Val IT is a complete framework covering value governance, portfolio management and investment management processes and activities. It is closely aligned with and complements COBIT, but delivers value to enterprises in its own right. While COBIT ensures that IT is working as effectively as possible to maximize the benefits of technology investment, Val IT helps enterprises make better decisions about where to invest, ensuring that the investment is consistent with the business strategy.

Val IT

Did you know that more than 2 out of 10 enterprise IT projects fail? Enterprise IT projects fail for a number of reasons, the main reason being that stronger governance over IT investments is needed.

If you find any of the following statements to be true of your organization, then your enterprise needs stronger governance over IT investments:

- IT investments do not support the business strategy or provide expected value
- There are too many projects, which results in inefficient use of resources
- Projects are often delayed, run over budget, and/or do not provide the needed benefits
- There is an inability to cancel projects when necessary
- Your enterprise needs to ensure compliance to industry or governmental regulations

The purpose of IT investment is to enable business change. In order to manage IT-enabled business change, IT investments need to be governed. Now, with the help of ISACA’s Val IT framework, you can make better decisions on where to invest in IT-enabled business change, increase your return on investments and generate business value. Val IT is a framework that focuses on value delivery, one of the five main areas of IT governance, and ensures that IT-enabled investments are managed through their full economic life cycle.

By applying the principles of portfolio management you can evaluate, direct and monitor IT investments over their full economic life cycle.
