

ROI for Your Enterprise Through ISACA

Great companies need great IT staff. With the complexity of information systems, increased risks, and the need for compliance, it is more important than ever that organizations recruit and retain employees who can take a comprehensive view of information systems and their relationship to organizational success.

ISACA members can understand the big picture.

They have direct access to research, certifications and products that align systems and strategy, and help your enterprise:

- Reduce IT-related risks
- Enable clear policy development and good practice for IT management
- Manage compliance
- Achieve greater trust in and significant value from information systems

ISACA membership signifies that your IT staff is:

- Dedicated to industry accepted practices and high professional standards
- Serious about enhancing their professional knowledge and skills
- Connected with the standards, resources and global network of colleagues that only ISACA can provide

Resumes and CVs may list experience and knowledge, but an ISACA designation proves it.

Supporting ISACA certification for your staff means that your enterprise has invested in a professional who:

- Possesses demonstrated knowledge and skills in IT audit, control, security and governance
- Has met the stringent requirements of a globally recognized credential
- Is committed to ongoing professional development
- Adheres to the ISACA Code of Professional Ethics

By supporting ISACA membership and certification, your enterprise can be certain that it is receiving a solid return on its investment.
