Quantify risk and assess using the CMMI standard to reach right-sized maturity levels, goals and meet business objectives. Leverage a prioritized risk roadmap that generates insights to help identify clear levels of investments, budgets and resources to close critical gaps. Harness scalable efficiency in assessing capability maturity across the implemented controls that align with leading, globally respected frameworks like COBIT, NIST, CMMC and FFIEC.

ISACA's CMMI Cybermaturity Platform is a cloud-hosted assessment solution that leverages a risk-based approach to building enterprise cyber maturity and resilience. Enterprises that want to understand what maturity level is right for them, and how to get there, need the ability to:

The Path to Mitigating Cybersecurity Risk is Building Cyber Maturity

Cybersecurity has become high stakes from Wall Street to the C-Suite. While enterprise leaders recognize that mature cybersecurity is essential to thriving in today's digital economy, they often lack the insights and data to have peace of mind that their organizations are efficiently and effectively managing cyber risk.

Managing Cybersecurity Risk: A Crisis of Confidence

At a time when cyberattacks have become the fastest-growing crime globally, confidence from board leaders in their organizations' preparedness is the exception, not the norm. This uncertainty is even more pronounced in a security landscape that has been further challenged by the COVID-19 pandemic.

Cybercrime damages are projected to cost the world US $6 trillion annually by 2021, up from $3 trillion in 2015.1 Every 11 Sec … But Confidence Is in Short Supply

COVID-19 Ups the Ante

Key Industries at Risk, Halting Business in its Tracks

51% 87% 58% Say threat actors will take advantage of the pandemic to disrupt organizations
Say the rapid shift to work from home will increase the risk of data privacy and protection issues

(Only half) are highly confident in their security team's ability to detect and respond to cyberthreats during the pandemic.

41% of all cybersecurity breaches reported.

Much is at Stake … But Confidence Is in Short Supply

The healthcare industry also is subject to the highest volume of ransomware attacks.

Financial and manufacturing services have the highest percent of exposed sensitive files.

Supply chain cyberattacks were up 78% in 2019.

Businesses will fall victim to a ransomware attack in 2021.
