PRESIDENT'S MESSAGE

[Alexander Josephite](#)

Greetings Fellow Chapter Members

ISACA just announced the new CyberSecurity certifications at the RSA Conference. The exams include labs and no members will be grandfathered. Extensive hands on training will be offered starting in June. Chapter elections will take place in May, so please be on the lookout for an email from the Chapter using VoteNet. Lastly, I hope to see you at an upcoming event or at our annual Gala on June 18th!

"Teamwork is a Key to Success"

Alexander Josephite, CISA, CIA, CFSA
ISACA® New York Metropolitan Chapter President

WASSERMAN AWARD 2015

[The Elements of Privacy Risk - GRC Illustration](#). Organizations that handle personal information face increasingly complex challenges to effectively manage privacy risk and compliance. The impact of these challenges covers the entire information life cycle.

Whether information is collected to support individual transactions, conduct research or meet legal requirements, the duty to keep that information secure and private arises. And when operations or information cross country boundaries, the challenge is even greater.

This illustration will provide insight into:

- Sources of data and risks involved in collection and use
- Principles and practices for effective data privacy management
- Common pitfalls to avoid

This illustration was produced jointly by OCEG and TRUSTe. TRUSTe provides a comprehensive suite of data privacy management solutions, including privacy assessment/certification services and a technology platform featuring assessment automation, compliance controls, and monitoring tools to ensure global compliance.

[Enterprise Security's Operations Problem - Panic in the Data Center](#). Every time we go through one of these panic-patch cycles - think **Heartbleed** and **Shellshock**- the security industry laments about difficulty of the whole process. It's a virtual certainty that there will be complaints about how "bugs like this" will be around forever because they're difficult to patch. I've yet to see anyone truly address the root cause of this, and I believe I know why.

[Risk-Driven Security: The Approach to Keep Pace with Advanced Threats](#) the catch phrase "intelligence-driven security" has never sat particularly well with me. Those who have read [my pieces](#) or have heard me speak may find this statement a bit surprising. The regular reader knows that I believe strongly in intelligence as a component of a successful and mature security program. Among its many virtues, intelligence improves detection, informs decision-making, and accelerates response. How can I make this statement? I'll elaborate.
